INDEX: VOLUME 24

AUTHORS AND SUBJECTS

Abstentions 346–354.
Adaptive systems 5–14, 15–24, 325–333.
Allen, Marshall: see Charles E. Warren.
Allison, James. Demand economics and experimental psychology. 403–415.
Allocation of resources 287–295.
Altruism 37–45.
Arms races 250–262.
Bargaining 369–381.
Beck, Henry. The Ocean-Hill Brownsville and Cambodian-Kent State crises: A biobehavioral approach to human sociobiology. 25–36.
Behavioral ecology 94–111.
Behavioral theory 287–295.
Behavior, gambling 334–345.
Behavior, group voting 355.
Behavior, network 112–120.
Bell, David E. A utility function for time streams having interperiod dependencies. 208–213.
Bertalanffy memorial lecture 238–249.
Bio-adaptive systems 15–24.
Biobehavioral systems 25–36.
Black box models 190–199.
Blute, Marion. Sociocultural evolutionism: An untried theory. 46–59.
Boehm, Christopher. Some problems with altruism in the search for moral universals. 15–24.
Bonacich, Phillip. A single measure for point and interval predictions of coalition theories. 85–93.
Book Reviews:
Watson, P. *War on the mind: The military uses and abuses of psychology*, (Billy L. Burnside, rev.). 281–283.
Boolean transformations 112–120.
Boundary subsystem 311–324.
Brent, Edward E., Jr., & Sykes, Richard E. A mathematical model of symbolic interaction between police and suspects. 388–402.
Buckley, Walter. Introduction (to special issue on sociobiology). 1–4.
Burnside, Billy L.: see book reviews, P. Watson.
Busch, John A. Sociobiology and general systems theory: A critique of the new synthesis. 60–71.
Campbell, Donald T. Comments on the sociobiology of ethics and moralizing. 37–45.
Cash flow 287–295.
Catastrophe theory 94–111.
Channel and net processes 388–402.
Chiaraviglio, Lucio: see Warren T. Jones.
Choice shift 334–345.
Choice, social 355.
Coalition formation 75–84, 85–93, 263–280, 369–381.
Coalition resources 75–84, 359–368.
Coalitions 359–368.
Coalition size 359–368.
Cognition 94–111, 121–139.
Community 388–402.
Complex models, approximation of 190–199.
Conceptual framework 296–310.
Cultural evolution 46–59.
Cyert, R. M., DeGroot, M. H., & Holt, C. A. Capital allocation within a firm. 287–295.
Decision making 75–84, 121–139, 208–213, 263–280, 334–345, 346–354, 359–368, 382–387, 403–415.
Decision processes 85–93, 94–111, 250–262, 287–295, 369–381.
DeGroot, M. H.: See R. M. Cyert.
Demand 403–415.
Demographics, university 140–151.
Deterministic prediction 85–93.
Deterrence theory 250–262.
Development of science 325–333.
Distributed lags 221–222.
Dockens, William S., III. Induction/catastrophe theory: A behavioral ecological approach to cognition in human individuals. 94–111.
Dynamic linear programming 200–207.
Ecology, behavioral 94–111.
Economics 403–415.
Eigenvector 382–387.
Elasticity 403–415.
Elections, three-candidate 346–354.
Eliciting probabilities 382–387.
Energy 169–189.
Ericson, Richard F. Society for General Systems Research at twenty-five: What agenda for our second quarter-century? 225–237.
Estimation of distributed lags 221–222.
Ethics 37–45.
Evaluating uncertain outcomes 208–213.
Evolution, cultural 46–59.
Evolution, social 37–45.
Evolution, sociocultural 60–71.
Farming, livestock 200–207.
Feed production 200–207.
Felsenthal, Dan S. Group versus individual gambling behavior: Reexamination and limitation. 334–345.
Finance, university 140–151.
Firm 287–295.
Fishburn, Peter C.: see William V. Gehrlein.
Fisher's model 221–222.
Gambling behavior 334–345.
Game, nonconstant sum 263–280.
Game, *n*-person 369–381.
Game theory 75–84.
Game theory, *n*-person 263–280.
Gehrlein, William V., & Fishburn, Peter C. Effects of abstentions on voting procedures in three-candidate elections. 346–354.
Gelfand, Alan E.: see Crayton C. Walker.
Generalizations 296–310.
Genetics 325–333.
Genetics, population 5–14.
Gillespie, John V., Zinnes, Dina A., Tahim, G. S., Sampson, Martin W., III, Schrodt, Philip A., & Rubison, R. Michael. Deterrence and arms races: An optimal control systems model. 250–262.
Ginsberg, Irving J.: see H. Andrew Michener.

Global energy system 169–189.
Group selection 37–45.
Groups 359–368.
Group systems 75–84, 263–280, 334–345, 369–381.
Group voting behavior 355.
Haefner, James W.: see Charles E. Warren.
Häfele, Wolf, & Sassin, Wolfgang. The global energy system. 169–189.
Health, organizational 311–324.
Hierarchy 296–310.
Holt, C. A.: see R. M. Cyert.
Hotelling test 382–387.
Human organisms 382–387.
Information transmission, symbolic 388–402.
Input processes, univariate 214–220.
Interactions, police-suspect 388–402.
International Institute for Applied Systems Analysis 155–168, 169–189, 190–199, 200–207, 208–213, 214–220, 221–222.
Interperiod dependencies, time streams with 208–213.
Jones, Warren T., & Chiaraviglio, Lucio. Is science an adaptive system? 325–333.
Kaczmarek, Z. Storage systems dependent on multivariate stochastic processes. 214–220.
Keren, Michael. Ideological implications of the use of open systems theory in political science. 311–324.
Keyfitz, Nathan. Understanding world models. 190–199.
Komorita, Samuel S. An equal excess model of coalition formation. 369–381.
Langley, Pat. A production system model for the induction of mathematical functions. 121–139.
Ledolter, Johannes. A note on the estimation of polynomial distributed lags. 221–222.
Levien, Roger E. Introduction to IIASA: Applying systems analysis in an international setting. 155–168.
Lewontin, R. C. Sociobiology as an adaptationist program. 5–14.
Linear programming, dynamic 200–207.
Livestock farming 200–207.
Living systems 296–310.
Majority rule 355.
Management strategy 112–120.
Mathematical models 200–207, 221–222.
Mead, Margaret 225–237.
Memorial lecture, Bertalanffy 238–249.
Michener, H. Andrew, Ginsberg, Irving J., & Yuen, Kenneth. Effects of core properties in four-person games with side-payments. 263–280.
Miller, Charles E. Coalition formation in triads with single-peaked payoff curves. 75–84.
Miller, Charles E. Probabilistic theories of coalition formation in groups. 359–368.
Modeling 238–249.
Models, black box 190–199.
Models, complex 190–199.
Models, Fisher's 221–222.
Models, mathematical 200–207, 221–222.
Models, production system 121–139.
Models, simulation 121–139.
Models, switching net 112–120.
Models, transparent 190–199.
Models, university stimulation 140–151.
Models, world 190–199.
Monts, J. Kenneth. The crisis in private university education: A simulation experiment. 140–151.
Moral systems 15–24.
Multivariate stochastic processes 214–220.
Network behavior 112–120.
N-person game 369–381.
N-person game theory 263–280.
Nucleolus 263–280.
Open system 311–324.
Optimal control theory 250–262.
Organism 94–111, 121–139, 403–415.
Organizational health 311–324.
Organizations 140–151, 287–295, 311–324, 346–354, 388–402.
Organizations, complex 112–120.
Organisms, human 382–387.
Philosophy 296–310.
Police-suspect interactions 388–402.
Polynomial distributed lags 221–222.
Population genetics 5–14.
Population projections, world 190–199.
Population, species 200–207.
Prediction 85–93.
Preference assessment 208–213.
Private university crisis 140–151.
Probabilities, eliciting 382–387.
Probability, subjective 382–387.
Problem solving, rational 15–24.
Processes, channel and net 388–402.
Processes, decision 250–262, 287–295, 369–381.
Processes, multivariate stochastic 214–220.
Processes, subsystem 60–71.
Processes, univariate input 214–220.
Production, feed 200–207.
Production system model 121–139.
Programming, dynamic linear 200–207.
Projections, world population 190–199.
Propoi, A. Dynamic linear programming models for livestock farms. 200–207.
Psychology 403–415.
Rational problem solving 15–24.
Reinforcement 403–415.
Research reports 221–222, 355.
Resources, allocation of 287–295.
Resources, coalition 75–84, 359–368.
Resources, water 214–220.
Richelson, Jeffrey T. A comparative analysis of social choice functions, I, II, III: A summary. 355.
Risk taking 334–345.
Risky shift 334–345.
Rosen, Robert. Sixth annual Ludwig von Bertalanffy memorial lecture. 238–249.
Rubison, R. Michael: see John V. Gillespie.
Rule induction 121–139.
Rule, majority 355.
Sampson, Martin W., III: see John V. Gillespie.
Sassin, Wolfgang: see Wolf Häfele.
Schrodt, Philip A.: see John V. Gillespie.
Science, development of 325–333.
Selection, group 37–45.
Shapley solution 263–280.
Shift, choice 334–345.
Shift, risky 334–345.
Simulation 140–151.
Simulation model 121–139.
Single-peaked preferences 75–84.
Social change 46–59.
Social choice 355.

Social evolution 37–45.
Social systems 85–93.
Social systems theory 46–59.
Societies 311–324, 346–354.
Society for General Systems Research 225–237, 238–349.
Sociobiology 1–4, 5–14, 15–24, 25–36, 37–45, 46–59, 60–71.
Sociocultural adaptive systems 15–24.
Sociocultural evolution 60–71.
Species population 200–207.
Stochastic prediction 85–93.
Stochastic processes, multivariate 214–220.
Stochastic storage theory 214–220.
Storage systems 214–220.
Strategy, management 112–120.
Structural-functionalism 311–324.
Subjective probability 382–387.
Subsystem, boundary 311–324.
Subsystem, energy distributor 169–189.
Subsystem processes 60–71.
Supranational systems 169–189, 250–262, 346–354.
Switching net models 112–120.
Sykes, Richard E.: see Edward E. Brent, Jr.
Symbolic information transmission 388–402.
Systems 60–71.
Systems, adaptive 5–14, 15–24, 325–333.
Systems, bio-adaptive 15–24.
Systems, biobehavioral 25–36.
Systems, global energy 169–189.
Systems, group 75–84, 263–280, 334–345,
Systems, living 296–310.
Systems model, production 121–319.
Systems, moral 15–24.
Systems, open 311–324.
Systems, social 46–59, 85–93.
Systems, sociocultural adaptive 15–24.
Systems, storage 214–220.
Systems supranational 169–189, 250–262, 346–354.
Systems theory, general 225–237, 238–249.
Tahim, G. S.: see John V. Gillespie.
Technocracy 311–324.
Time streams 208–213.
Transformations, Boolean 112–120.
Translevel 296–310.
Transparent models 190–199.
Tree ring growth 221–222.
Triads 359–368.
Uncertain outcomes, evaluating 208–213.
Univariate input processes 214–220.
University 140–151.
Utility function for time streams 208–213.
Voting, group 355.
Walker, Crayton C., & Gelfand, Alan E. A system theoretic approach to the management of complex organizations: Management by exception, priority, and input span in a class of fixed-structure models. 112–120.
